Project Abstract:
Give a high-level description of your project. Highlight technical challenges and your expectations.
Introduction:
Describe the applications of your project and where you see it being used. If available, provide diagrams or figures of similar existing devices (from websites, articles, or advertisements, etc.). Describe how will your product differ from what is currently available?

Technical Objectives:
Quantify the performance specifications and/or requirements of your design. For example, list required power consumption, bandwidth, etc. Figures and graphs are desirable; if used, you must include and reference the diagram in the text of your report.

Cost Objectives:
Quantify the expected costs for your prototype and compare it with the cost of similar presently available products, if any.

References or Bibliograph:
List any papers, books, websites that you will use for your project.

Materials and Resources:
List any major components and resources required in the development of your project.
