EM1 & HEDS Transmissive Optical Encoder Module

Description:

The **EM1** and **HEDS** products are transmissive optical encoder modules. These modules are designed to detect rotary or linear position when used together with a codewheel or linear strip. The **EM1** and **HEDS** modules consist of a lensed LED source and a monolithic detector IC enclosed in a small polymer package. These modules use phased array detector technology to provide superior performance and greater tolerances over traditional aperture mask type encoders.

Both the **EM1** and **HEDS** module provide digital quadrature outputs. The **EM1** comes standard with a third index channel output on all resolutions. The **HEDS** is available with a third index channel output on some resolutions.

The **EM1** and **HEDS** transmissive optical encoder module are powered from a single +5VDC power supply. Additional power supply voltages for the **EM1** will be available in the near future. The **EM1** single-ended outputs are capable of sinking or sourcing 8mA each.

The resolution of the modules and encoder disks or linear strips must match. Two mounting holes are provided to accept 4-40 machine screws. Both the **EM1** and **HEDS** have identical mounting and pin-out configurations.

For open collector and higher voltage applications, add the **PC3** device (*see the **PC3** data sheet*), or for differential cable driver outputs, add the **PC4** device (*see the **PC4** data sheet*). Encoder disks, linear strips, quadrature decoder chips, counter chips, computer interface boards, mating connectors and cables are also available.

Features:

- Two channel quadrature output with index pulse
- No signal adjustment
- TTL Compatible
- Single +5V supply
- US Digital warrants its products against defects in materials and workmanship for two years. See complete warranty for details.

EM1:

- Resolutions up to 2500 CPR (10,000 PPR)
- Internal 0.1 ufd bypass capacitor
- -55°C to 125°C operating temperature

HEDS:

- Resolutions up to 2048 CPR (8192 PPR)
- -40°C to 100°C operating temperature

Phase Relationship:

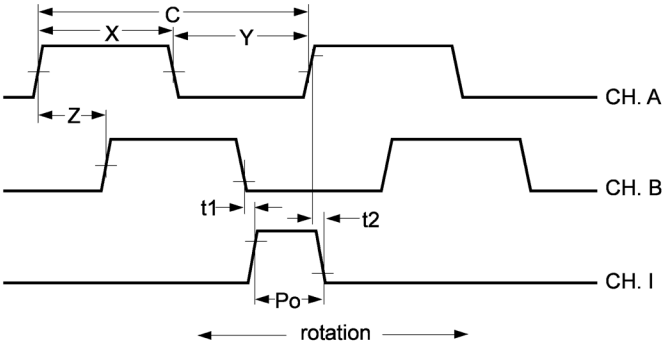
Shaft Rotation For Shaft Encoders: (View the encoder so the shaft / bushing side is facing up.)

- A leads B in a clockwise rotation; B leads A in a counterclockwise rotation for the following products: **H1.**
- B leads A in a clockwise rotation; A leads B in a counterclockwse rotation for the following products: **H15D, H15S, H3, H5D, H5S, H6D, H6S, HD25, S1, S2, S5D, S5S, S6D, S6S** and **SP-16.**

Shaft Rotation For Kit Encoders: (View the encoder so the cover side is facing up.)

- A leads B in a clockwise rotation; B leads A in a counterclockwise rotation for the following products: **E3, E5D, E5M, E5S, E6D, E6M** and **E6S.**
- B leads A in a clockwise rotation; A leads B in a counterclockwise rotation for the following products: **E2.**

Timing Diagram:



CPR (N): The number of Cycles Per Revolution.
One Shaft Rotation: 360 mechanical degrees, N cycles.
One Electrical Degree (°e): 1/360th of one cycle.
One Cycle (C): 360 electrical degrees (°e). Each cycle can be decoded into 1 or 4 codes, referred to as X1 or X4 resolution multiplication.
Symmetry: A measure of the relationship between (X) and (Y) in electrical degrees, nominally 180°e.
Quadrature (Z): The phase lag or lead between channels A and B in electrical degrees, nominally 90°e.
Index (CH I.): The index output goes high once per revolution, coincident with the low states of channels A and B, nominally 1/4 of one cycle (90°e).
Position Error: The difference between the actual shaft position and the position indicated by the encoder cycle count.
Cycle Error: An indication of cycle uniformity. The difference between an observed shaft angle which gives rise to one electrical cycle, and the nominal angular increment of 1/N of a revolution.

EM1 & HEDS Encoder Module Differences:

US Digital is the designer and manufacturer of the **EM1** transmissive optical encoder module. The design of the **EM1** provides electrical and mechanical compatibility with the Agilent **HEDS-9000**, **HEDS-9100**, **HEDS-9200**, **HEDS-9040**, and **HEDS-9140** series modules. Non-index codewheels are interchangable between the **EM1** and **HEDS** modules. The process of switching from the **HEDS** to the **EM1** module should not require any mechanical or electrical changes. Simply use the **EM1** and matching codewheel in place of the **HEDS** module and codewheel.

The **EM1** has a built in index channel and is available on all resolutions, for both rotary disks and linear strips. The **EM1** offers improved output drive capability and will source and sink 8mA at TTL levels. The current consumption is reduced over Agilent index versions (27mA vs. 57mA typical). Physically the **EM1** has no external wire loops which interfere when mounting. The connector pins are 0.051" shorter than Agilent, while still providing .30" insertion depth. The **EM1** uses a US Digital designed codewheel with 2 tracks rather than 3 tracks for index versions. US Digital's **EM1** offers custom and special resolutions.

Ordering Information:

- The part numbers below do not include optical encoder disks or linear strips.
- Disks and linear strips must be ordered separately (*see the **DISK / LIN** data sheet*).
